

Enlighten the path to drug discovery ...

... by outsourcing your research to our experts.

**We apply cutting-edge functional genomic technologies
for target identification and validation:**

- Pooled lentiviral shRNA and miRNA library construction
- Functionally validated, focused lentiviral shRNA libraries
- HT sequencing-based shRNA library functional screens
- Bioinformatic data analysis of RNAi screens
- Rational directed evolution and site-directed mutagenesis
- Stable reporter, knockdown, and protein overexpression cell lines

Cellecta specializes in functional lentiviral shRNA screens and product development for customers through contract research. All IP rights for the data generated in the course of a project are owned by the customer. Cellecta agrees to maintain absolute confidentiality of customer data.
